EDUCATION

Taguig City University

Bachelor of Science in Computer Science

Aug 2021 – July 2025

Taguig, Philippines

ACHIEVEMENTS

IT Olympics Competitor – Represented the University of Makati in Cybersecurity and Android Productivity competitions, demonstrating strong technical expertise and teamwork.

Student College Director – Led student programs, boosted participation in competitions, and guided peers as the elected College Director.

Latin Honors – Graduated Cum Laude for consistent academic excellence and dedication.

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, TypeScript, Python, C#, SQL

Frontend: React, Next.js, Vite, Tailwind CSS, ShadCN UI, React Native

Backend: Node.js, Express.js, REST APIs, JWT Authentication, Role-Based Access Control

Databases: Microsoft SQL Server, MySQL, Supabase

Cloud & DevOps: Docker, AWS, S3 (Pre-signed URLs), LocalStack, GitHub Actions

AI & Automation: OpenAI API, Claude AI, GitHub Copilot, Antigravity, Kiro, LLM Integration

Developer Tools: Git, GitHub, VS Code, Cursor, Figma

EXPERIENCE

Software Developer

Jan 2024 – Present

Freelance

- Designed and developed full-stack web and mobile applications for startups and enterprise clients.
- Used AI-assisted development tools such as Claude AI and GitHub Copilot to improve code quality, refactoring, and implementation speed while maintaining manual review and control.
- Built secure backend services with JWT authentication, role-based access control, and structured approval workflows.
- Collaborated with stakeholders to translate business processes into automated, scalable software solutions.

Frontend Developer

Jan 2025 – June 2025

Aique

BGC, Taguig City, Philippines

- Developed responsive and reusable UI components using React and modern frontend tooling.
- Integrated complex backend APIs and ensured clean data flow across multiple user roles.
- Worked in an agile environment with regular code reviews, sprint planning, and feature iterations.

Software Developer

August 2025 – May 2026

Beyondgen

- Developed an enterprise Supplier Quality Management system to digitize supplier compliance, quality workflows, and approval processes.
- Implemented multi-form submission workflows with multi-user approval flows for reviewers, approvers, and administrators.
- Built a dedicated backend server connected to Microsoft SQL Server without ORM to manage approvals, audit logs, and status tracking.
- Used Claude AI, Antigravity, and Kiro to assist with workflow design, repetitive task automation, and code review while maintaining manual validation.

Software Engineer

Sep 2025 – Nov 2025

Keep It Simple OS (Fitness Tech Startup)

- Built a centralized platform for trainers to manage clients, messaging, and performance tracking.
- Integrated third-party APIs and AI-assisted messaging to streamline communication workflows.

- Delivered production-ready features under tight deadlines while maintaining system stability.

Full Stack Developer

2025 – 2026

BuildFast

- Developed AI-powered platforms using modern frontend and backend architectures.
- Leveraged AI tools such as Claude AI and GitHub Copilot to accelerate development, refactor legacy code, and improve maintainability.
- Implemented scalable systems with clear separation of concerns and production-ready workflows.

PROJECTS

AiLead – AI Video Generation Platform | *Vite, React, TypeScript, OpenAI, Gemini, D-ID API* 2025 - 2026

- Built an AI-powered platform that generates scripts and avatar-based videos from structured user prompts.
- Integrated OpenAI and Gemini for script generation and D-ID API for AI-driven video synthesis.
- Used Claude AI and GitHub Copilot to refactor components, improve logic flow, and accelerate feature development while ensuring manual validation.
- Implemented history tracking and output management for generated videos and user content.

LMS Learning Platform | *React, TypeScript, Docker, AWS, Tailwind, Vitest* 2025 - Present

- Implemented secure authentication with JWT, email verification, and role-based access control.
- Enabled media uploads using AWS S3 with secure pre-signed URLs and LocalStack.
- Containerized services with Docker for consistent development and deployment workflows.

Jobint AI Interview | *React Native, Firebase, AI/ML, Speech Recognition, Android and IOS* 2024 – 2025

- Built an AI-powered mock interview app providing personalized feedback and performance insights.
- Integrated speech analysis to assess clarity, pacing, and communication effectiveness.
- Compatible with android and IOS device we proper working feature and implementation.

SwiftPass Guard | *React Native, Supabase, WebSockets, ESP32, OpenAI* 2025

- Developed a QR-based attendance and access control system with real-time synchronization and offline support.
- Implemented administrative dashboards for monitoring attendance, access logs, and user roles.
- Completed complex system features within a 2-week timeline using OpenAI and GitHub Copilot to assist with problem-solving and rapid iteration.
